

**155 Mb/s, 2x5 SFF Package, BIDI
TX 1310/RX 1550, TX 1550/RX 1310 nm
Multimode, 2 – 5 km Distance**

Description

The bi-directional (BIDI) transceiver product is unique in that only one single fiber (single mode or multimode) is required to transmit and receive signals simultaneously. That means the total bandwidth capacity of an existing cable infrastructure can be doubled instantly. The typical design of a BIDI transceiver uses a 1310 nm LD to transmit and 1550 nm PD to receive, and vice versa for the matching one (1310 nm to receive and 1550 nm to transmit) at the other end to make a complete link.

OptixCom's BIDI transceivers utilize advanced filter optics to separate the two wavelength with more than 45 dB of isolation. The products use industry standard 2x5 SFF pluggable package. These transceivers operate at 155 Mb/s for 2 - 5 km transmission distance with multimode fibers. The products are RoHS compliant.
